STATEMENT OF RESPONSIBILITY REGARDING WINDOWS® OS UPDATES

The Windows® operating systems on AtlasIED GLOBALCOM™.IP based products which include the IP100 Series products and the DELL server platforms, are updated at the time of initial installation of the AtlasIED software with the latest AtlasIED approved Windows® updates prior to shipment. The Windows® operating system on 1151 and 1152 server-based systems are updated at the time of initial installation of the AtlasIED software with the latest, pertinent Windows® updates available at the time of the initial software installation.

In either case, once the initial installation of AtlasIED software and Windows® updates are complete, Windows® updates are then turned off. Additionally, AtlasIED does not recommend automatic installation of future Windows® updates as this could adversely affect system function or cause system restarts on its own. AtlasIED periodically, or on any special as-needed basis, reviews security updates for Windows IoT for our GLOBALCOM™.IP products, and releases update packages suitable for off-line installation. Other versions of Windows®, such as Windows® Server, running non-GLOBALCOM™.IP systems on hardware platforms such as Dell servers can be updated if desired from standard Microsoft internet resources. If the owner of AtlasIED system(s) elects to install additional Windows® updates, that owner is responsible for all installation and testing of said updates. In the event that such update(s) cause system functional abnormalities, AtlasIED can provide technical advice and assistance.

AtlasIED will solely determine when/if applicable charges for technical advice and assistance will be applied. Out of warranty end users, and/or those not covered by an Assurance Plan, will be assisted as technical support is available and applicable charges for that technical support will be applied.
